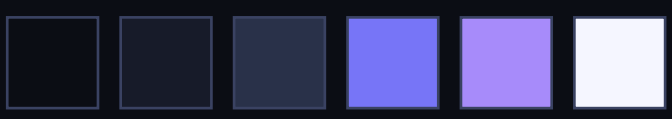
Ultimate UI/UX Master Prompt

MyAnimeList - NextGen Anime & Manga Social Platform

Product design, design system, and frontend implementation brief



1. Your Role

Act as a world-class:

- Senior Product Designer.
- UI/UX Architect.
- Design Systems Engineer.
- Frontend Architect.
- Product Experience Strategist.

Your responsibility is to design and build an exceptionally polished, modern, premium, responsive anime and manga social networking platform.

Do not design this as a traditional database website. Design it as a visually rich, interactive entertainment community where users can discover anime, track their watching progress, maintain manga collections, share opinions, follow friends, customize profiles, and express their anime identity.

The platform should look like a product that could compete with AniList, MyAnimeList, Letterboxd, and other modern entertainment platforms.

Primary design objective: Make browsing, tracking, and sharing anime feel addictive, beautiful, intuitive, and effortless.

---

2. Design Philosophy

Visual principles

- Content-first design: Anime and manga artwork should be the visual centerpiece.
- Premium aesthetics: Avoid generic templates and repetitive dashboard cards.
- Consistency: Every page must share the same design language.
- Hierarchy: Important information must be immediately recognizable.
- Simplicity: Avoid unnecessary buttons, icons, labels, and visual clutter.
- Personality: Profiles should feel like personal spaces, not database records.
- Discoverability: Users should always know what they can do next.
- Responsiveness: Every interaction must work perfectly on mobile.
- Feedback: Every action must provide appropriate visual feedback.
- Accessibility: Readability, keyboard navigation, contrast, and touch targets matter.

Avoid

- Generic SaaS dashboard appearance.
- Excessive gradients.
- Too many rounded containers.
- Excessive glassmorphism.
- Giant empty spaces.
- Random icon usage.
- Oversized headings.
- Unnecessary animations.
- Inconsistent spacing.
- Tiny mobile buttons.
- Horizontal scrolling across the entire page.
- Overloaded navigation.

- Fake statistics and meaningless decorative widgets.

Use cards strategically, not for everything.

---

3. Brand Identity & UI Themes

Create a distinctive visual identity. The initial default theme should be a sophisticated dark interface.

Theme A: Midnight Indigo (Default)

This is the primary product identity.

Element	Color
Main background	#0B0D14
Secondary background	#10131D
Elevated surface	#171B29
Hover surface	#202638
Border	#293149
Primary	#7775F7
Primary hover	#9290FF
Secondary accent	#A78BFA
Text primary	#F5F6FF
Text secondary	#A1A7BA
Muted text	#71798F
Success	#34D399
Warning	#FBBF24
Danger	#F87171

Characteristics:

- Deep midnight backgrounds.
- Subtle indigo accents.
- Clean typography.
- Beautiful anime artwork.
- Subtle shadows.
- Minimal borders.
- Premium cinematic atmosphere.

Theme B: Pure Dark

For users who prefer an AMOLED-style appearance. Use almost-black backgrounds with restrained highlights.

- Background: #000000.
- Surface: #0A0A0A.
- Elevated surface: #151515.
- Border: #252525.
- Accent: #8B7CFF.

Theme C: Light Canvas

A sophisticated light theme. Avoid pure white everywhere. Use soft gray surfaces for depth.

- Background: #F6F7FB.
- Surface: #FFFFFF.
- Secondary surface: #EEF0F7.
- Border: #E4E7EF.
- Primary: #615FEA.
- Text: #171923.
- Secondary text: #62697B.

Theme D: Sakura

A soft Japanese-inspired aesthetic. Use subtle pink and violet accents, not excessive pink backgrounds.

- Background: #17131C.
- Surface: #211A27.
- Primary: #E89AB8.
- Secondary: #B99BEA.
- Accent: #F6C6D7.

Theme E: Cyberpunk

A futuristic anime-inspired theme. Use neon colors sparingly for important interactions.

- Background: #0A0D13.
- Surface: #121923.
- Primary: #00E5FF.
- Secondary: #FF4FD8.
- Accent: #A3FF12.

Theme functionality

Provide a Theme Studio under Settings > Appearance. Users can:

- Select a theme.
- Switch between dark and light mode.
- Choose an accent color.
- Adjust interface density.
- Choose rounded or slightly squared cards.
- Enable reduced motion.
- Preview changes before applying.

Persist theme preferences in the user profile. Use CSS variables and design tokens instead of hardcoding theme colors in individual components.

---

4. Typography & Design System

Use Inter as the primary interface font. Optionally use: Manrope for selected headings; Noto Sans JP for Japanese text; a suitable serif font for editorial content.

Typography scale

Element	Desktop	Mobile
Main page title	32px	25px
Section title	23px	20px
Card title	15px	14px
Body	14px	14px
Secondary text	12px	12px
Small metadata	11px	11px

Typography rules:

- Use medium and semibold weights for most interface elements.
- Reserve extra bold for major titles.
- Keep paragraphs readable.
- Avoid unnecessary uppercase text.
- Use tabular numerals for statistics.
- Truncate long titles carefully and provide full titles on detail pages.

Spacing system

Use a consistent 4px-based spacing system.

- 4px: Icon/text separation.
- 8px: Compact spacing.
- 12px: Small component gaps.
- 16px: Standard component spacing.
- 24px: Card and section spacing.
- 32px: Major section spacing.
- 48px: Large page separation.
- 64px: Hero and editorial spacing.

Border radius

- Small controls: 8px.
- Buttons: 10px.
- Standard cards: 14px.
- Large panels: 18px.
- Modal: 20px.
- Pills: Fully rounded.

---

5. Global Application Layout

The application should have two distinct layouts: (1) the public marketing and discovery experience, and (2) the authenticated social application experience. Maintain a consistent brand identity across both.

Desktop navigation

Create a fixed or sticky top navigation bar, approximately 72px high.

- LEFT: Brand icon, brand name, main navigation.
- CENTER: Global search bar.

- RIGHT: Create button, notifications, messages, user avatar and dropdown.

Navigation links: Home, Discover, Anime, Manga, Community, Seasonal.

User dropdown: My Profile, My Anime List, My Manga List, Favorites, Collections, Statistics, Settings, Log Out.

The active navigation item must be visually highlighted. Use subtle hover backgrounds and animated active indicators.

Desktop content layout

Maximum content width: approximately 1440px. For standard pages:

- Center the main content.
- Use a 12-column grid.
- Main content: 8-9 columns.
- Optional sidebar: 3-4 columns.
- Maintain consistent gutters.

Do not force a sidebar onto every page.

Mobile navigation

Create a mobile-specific navigation system.

- Top header: logo, search icon, notifications, avatar.
- Fixed bottom navigation: Home, Discover, My List, Community, Profile.

Use Lucide icons with short labels. Requirements:

- Respect device safe areas.
- Avoid content being hidden behind the bottom bar.
- Active icon receives accent color.
- Bottom bar uses a slightly elevated surface.
- Add subtle active transitions.
- Do not display the desktop navigation on mobile.

---

6. Homepage - Discover Experience

The homepage should immediately communicate that this is an anime community. Design a rich, editorial-style homepage.

Section 1: Welcome header

At the top of the authenticated homepage: "Welcome back, [Username]". Subtitle: "Your next favorite story is waiting."

- On the right: current date, user avatar, quick add button.
- For mobile, simplify this into a compact greeting.

Section 2: Continue Watching

Display a horizontal carousel of anime the user is currently watching. Each card includes: poster, anime title, current episode, total episodes, progress bar, last watched information, Continue button, three-dot menu.

Example: Solo Leveling - Episode 08 / 13 - 61% completed.

Actions: update progress, mark completed, open anime details, remove from list.

Empty state for new users: "Your watching journey starts here." Button: Explore Anime.

Section 3: Hero Featured Anime

Use a cinematic featured anime banner.

- Large landscape background with dark gradient overlay.
- Anime poster on desktop where appropriate.
- Ranking or trending badge.
- Anime title, Japanese title, short synopsis.
- Genre tags, rating, release information.
- Actions: View Details, Add to List, Watch Trailer, Favorite.
- Carousel controls: previous, next, slide indicators, optional autoplay with pause controls.

Do not autoplay aggressively.

Section 4: Trending Anime

Display a horizontal poster carousel. Each poster contains: anime artwork, ranking number, title, rating, format, optional status indicator.

- Hover on desktop: slight image zoom, quick action buttons, reveal rating and additional information.
- Click: open the anime detail page.

Section 5: Your Anime Feed

Create a personalized activity feed. Examples: "Ashok completed Attack on Titan." / "Shade rated Vinland Saga 9/10." / "Someone you follow added Blue Lock to their watchlist."

Activity item structure: avatar, username, action description, anime poster thumbnail, timestamp, like, comment, more options.

Section 6: Popular Manga

Display manga and manhwa collections using portrait covers and clear title labels. Include: Trending, Top-rated, Recently updated, Popular manhwa.

Section 7: Seasonal Anime

Show season, year, poster, release day, next episode date, and user rating. Provide a View Seasonal Calendar link.

Section 8: Community Highlights

Show: trending discussions, popular reviews, user-created collections, recommended members.

Homepage customization

Allow users to: rearrange homepage sections; hide sections; select preferred content types; choose compact or comfortable layout. Store these preferences.

---

7. Discover Page

Create a dedicated content exploration experience. Title: **Discover Anime & Manga.** Subtitle: "Explore thousands of stories and find your next obsession."

Search interface

Large search field with: search by title, search suggestions, recent searches, popular searches, clear button.

Search categories: All, Anime, Manga, Characters, People.

Filter sidebar (desktop)

Place a collapsible filter panel on the left. Filters: content type, genres, themes, release year, season, format, status, studio, source, minimum rating, maximum rating.

On mobile: use a Filter button that opens a bottom sheet or full-screen filter panel; display selected filter chips; provide Reset and Apply buttons.

Results layout

Provide two view options: poster grid and compact list.

- Poster grid: 2 columns mobile, 3 small tablet, 4 desktop, 5-6 wide desktop.
- Each card: artwork, title, rating, release year, format, add-to-list button.
- Sorting: popularity, score, recently added, release date, alphabetical.
- Use pagination or infinite scrolling with proper loading states.

---

8. Anime Detail Page

This is one of the most important pages. Create a visually rich, content-focused layout.

Top hero area

Use a large landscape anime background with a dark overlay.

- Desktop LEFT: anime poster, Add to List button, Favorite button.
- Desktop CENTER: main title, Japanese title, alternative titles, synopsis, genre tags, studio, release year, season, format, episode count, duration, status.
- Desktop RIGHT: large community rating, popularity rank, score distribution, personal rating when applicable.
- Mobile: background banner; poster and information stacked below; primary actions clearly visible; sticky Add to List action where appropriate.

Main content tabs

Overview, Episodes, Characters, Reviews, Discussions, Related.

Overview tab

Show: synopsis, information, genres, themes, studios, producers, trailer, related titles, recommendations.

Episodes tab

Each episode displays: episode number, title, air date, filler indicator where available, user watched status. Allow users to update watched episodes.

Characters tab

Character cards: portrait, name, role, voice actor.

Reviews tab

Show: community reviews, rating, reviewer, review date, helpful votes, spoiler warnings.

Discussions tab

Show: recent discussions, episode discussion threads, community topics. Provide spoiler protection.

---

9. Manga Detail Page

Use a similar visual structure to anime details. Include: cover image, title, alternative titles, synopsis, author, artist, serialization, publisher, genres, chapters, volumes, status, community score, popularity.

- Actions: Add to Reading List, Favorite, Review, Share.
- Progress controls for chapters read and volumes read.
- Manga-specific tabs: Overview, Characters, Reviews, Related, Discussions.

---

10. User Profile - The Most Important Social Page

Profiles should feel like customizable personal websites. A profile should communicate the user's anime identity immediately. URL: /user/username

Profile cover

Full-width cover image. Height: desktop 280-340px, mobile 180-220px. Allow users to upload custom banners.

Profile identity section

Position the avatar overlapping the banner. Display: avatar, username, display name, verification badge if applicable, level, country (optional), join date, biography, website/social links, followers, following.

- Actions: Follow, Unfollow, Message, More options.
- For the profile owner: Edit Profile, Customize Profile, Share Profile.

Profile statistics strip

Display four to six compact statistics: Anime Completed, Currently Watching, Manga Completed, Total Episodes, Total Watch Time, Average Score. Use actual database values.

Profile tabs

Overview | Anime | Manga | Favorites | Collections | Reviews | Statistics | Activity. On mobile, make these horizontally scrollable or use a compact dropdown.

Overview layout

Two columns on desktop.

- MAIN COLUMN: Currently Watching; Recently Completed; Favorite Anime; Favorite Manga; Recent Reviews; Recent Activity.
- RIGHT SIDEBAR: Profile information; Favorite genres; Top anime; Top characters; Watching statistics; Social links.
- Mobile: stack all sections vertically, most important information first.

Anime and Manga profile tabs

Allow visitors to browse public lists. Filters: status, genre, rating, year. Sorting: recently updated, highest rated, title, progress. Provide poster grid and list views.

Profile customization

Allow users to customize: cover, avatar, accent color, featured anime, featured manga, profile sections, section order, public visibility. Include a live profile preview before saving.

---

11. My List - Personal Tracking Dashboard

This is the user's main personal management area. Create separate Anime and Manga sections.

- Anime status tabs: All, Watching, Completed, On Hold, Dropped, Plan to Watch.
- Manga status tabs: All, Reading, Completed, On Hold, Dropped, Plan to Read.

Library layout

- Desktop: table/list view as an option; poster grid as the visual default.
- Mobile: compact poster rows or two-column poster cards.
- Each item shows: poster, title, personal rating, current status, progress, updated date, quick edit, more options.

Quick update interactions

When clicking the progress indicator, open a compact edit popover.

- Anime: current episode, total episodes, status, personal score, start date, finish date.
- Manga: chapters, volumes, status, score, start date, finish date.

List toolbar

Top-right controls: search within list, filter, sort, grid/list toggle, export list. Users should be able to update progress without navigating away.

---

12. Favorites Page

Create a visually appealing favorites collection. Categories: Favorite Anime, Favorite Manga, Favorite Characters, Favorite People, Favorite Studios.

Display larger artwork than standard list cards. Allow: drag-and-drop reordering, remove from favorites, add to custom collection, share favorites.

---

13. Collections

Users should be able to create custom collections. Examples: Greatest Anime Ever; Best Romance; Dark Psychological Anime; My Childhood Anime; Underrated Masterpieces.

Collection page contains: custom cover, title, description, creator, number of titles, public/private indicator, follow or save collection, share button. Provide drag-and-drop sorting.

---

14. Community Page

Create a social community experience.

- Desktop: main feed in the center; trending sidebar; recommended members.
- Mobile: single-column feed; compact filters; bottom navigation.

Feed filters

For You, Following, Trending, Reviews, Discussions.

Feed composer

At the top: "What are you watching or reading?" Users can: write a status, share anime, share manga, post a review, share a collection.

Activity cards

Include: user avatar, username, activity text, timestamp, associated anime/manga, like, comment, share, more options.

---

15. Reviews & Discussions

Reviews

Build a clean editorial review experience. Each review: user avatar, username, anime/manga poster, score, review title, review body, pros and cons, spoiler label, like count, comment count, date.

Review editor: select title; score selector 1-10; review title; rich text editor; spoiler toggle; submit button.

Discussions

Provide: anime discussion boards, manga discussion boards, general community discussions, episode discussions, polls.

Support: threaded comments, upvotes or likes, spoiler tags, sorting, reporting.

---

16. Search Experience

Global search should be available throughout the application.

- Desktop: search field in top navigation.
- Mobile: dedicated full-screen search experience.
- Suggestions display: anime poster, title, content type, release year.
- Search tabs: All, Anime, Manga, Characters, Users.
- Include: recent searches, trending searches, popular titles, keyboard shortcuts, empty state, no results state.
- Search should support debouncing and pagination.

---

17. Notifications & Messages

Notifications

Create a notification center accessible from the header. Types: new follower, review like, comment, reply, mention, collection interaction.

Use: unread dot, relative timestamp, actor avatar, notification description, relevant content thumbnail. Include: mark as read, mark all as read, notification preferences.

Direct messaging

Build private conversations. Features: conversation list, search messages, message history, text messages, shared anime/manga links, read status, unread count, block/report functionality. Do not expose private conversations publicly.

---

18. Statistics Dashboard

Create a sophisticated personal analytics page using attractive, readable visualizations.

- Cards: anime completed, episodes watched, total watch time, manga completed, chapters read, average score.
- Charts: anime completed by month, genre distribution, watching activity by year, rating distribution, anime by season, manga reading progress.
- Include: year selector, anime/manga selector, all-time statistics, personal records.

Charts must use real data. Avoid meaningless graphs.

---

19. Seasonal Anime Calendar

Create a dedicated seasonal calendar.

- Header: Winter, Spring, Summer, Fall, year selector.
- Calendar layout: Monday-Sunday or another clearly labeled weekly arrangement; upcoming episode releases; anime title; poster thumbnail; episode number; release time in the user's local timezone.
- Users can: follow seasonal anime, add anime to their watchlist, hide completed series, filter by genre, view anime details.
- Mobile: use a vertical chronological schedule rather than squeezing a desktop calendar.

---

20. Profile & Account Settings

Build a dedicated settings experience.

- Desktop: left settings navigation, right settings content.
- Mobile: settings category list, dedicated settings screens.

Categories: Account, Profile, Privacy, Notifications, Appearance, Security, Connected Accounts, Blocked Users, Data & Export. Use proper save feedback and confirmation dialogs.

---

21. Admin Interface

The admin interface should be visually consistent but operationally separate. Include: Overview, User management, Anime management, Manga management, Reports, Moderation, Community management, Analytics, Audit logs.

Use tables for operational data. Provide: search, filters, pagination, bulk actions, confirmation dialogs.

---

22. Component Design Specifications

Create reusable design components.

- **Navigation:** DesktopNavbar, MobileHeader, MobileBottomNavigation, UserDropdown, NotificationPopover.
- **Anime:** AnimePosterCard, AnimeLandscapeCard, AnimeHeroBanner, AnimeQuickView, AnimeRating, AnimeProgress, AnimeStatusBadge, AnimeCarousel.
- **Manga:** MangaPosterCard, MangaQuickView, MangaProgress.
- **Social:** UserAvatar, UserProfileHeader, FollowButton, ActivityCard, ReviewCard, CommentThread, FeedComposer, CollectionCard.
- **Interface:** SearchCommand, FilterPanel, Modal, Drawer, BottomSheet, Toast, Tooltip, Dropdown, Skeleton, EmptyState, ErrorState, ConfirmationDialog.

Every reusable component must support consistent design tokens and responsive behavior.

---

23. Interaction & Micro-Interaction Guidelines

Use Framer Motion or CSS animations where appropriate.

- Hover: poster scales slightly; buttons transition smoothly; cards reveal additional actions; links change color; avatar receives a subtle outline.
- Click: buttons provide immediate feedback; add-to-list opens a status selector or saves using the chosen default; favorite icon animates when activated; progress updates without a full-page refresh; tabs transition cleanly.
- Loading: use skeleton placeholders matching the final content layout.
- Empty states: every list and feed should have an informative empty state. Example: "You haven't added any anime yet." CTA: "Discover Anime".
- Error states: understandable error messages and retry actions.

Animation duration

Interaction	Duration
Hover	150-200ms
Button	150ms
Popover	180ms
Modal	200-250ms
Page transition	200-300ms

Respect reduced-motion preferences.

24. Responsive Design Rules

Design mobile-first.

Breakpoints

Device	Range
Small mobile	320-374px
Standard mobile	375-639px
Tablet	640-1023px
Desktop	1024-1439px
Wide desktop	1440px+

Mobile rules

- No horizontal page overflow.
- No tiny touch targets; minimum comfortable target around 44px.
- Maintain readable text.
- Keep primary actions visible.
- Avoid unnecessary sidebars.
- Convert desktop sidebars into stacked sections or drawers.
- Use bottom sheets for mobile filters and quick actions.
- Optimize images for mobile bandwidth.

- Respect safe-area insets.
- Keep bottom navigation from covering content.

Tablet rules

- Use adaptive grids.
- Avoid excessively wide poster cards.
- Collapse secondary sidebars when necessary.
- Keep primary navigation accessible.

Desktop rules

- Use full content width efficiently.
- Preserve readable line lengths.
- Use hover interactions where appropriate.
- Do not stretch content unnecessarily.

---

25. Accessibility & Usability

Implement:

- Semantic HTML.
- Keyboard-accessible navigation.
- Visible focus indicators.
- Proper form labels.
- Accessible dialogs.
- Screen reader descriptions.
- Appropriate contrast.
- Meaningful button labels.
- Alt text for artwork.
- Reduced motion.
- Clear validation messages.

Do not use color alone to communicate status.

---

26. Page-by-Page UX Priority

The following hierarchy determines what users should notice first.

Page	Primary focus	Secondary focus
Home	Discover and continue watching	Community activity
Discover	Search and browse	Filters
Anime details	Artwork and anime information	Add to List
Manga details	Artwork and manga information	Reading progress
Profile	Identity and collection	Social activity
My List	Tracking and progress	Sorting
Community	Feed and interactions	Discussions
Reviews	Ratings and opinions	Helpful reviews

Page	Primary focus	Secondary focus
Statistics	Personal progress	Analytics
Settings	Easy configuration	Privacy

Never give equal visual importance to every element.

27. UI Implementation Requirements

Technology

- Next.js App Router.
- React.
- TypeScript.
- Tailwind CSS.
- shadcn/ui.
- Framer Motion.
- Lucide React.
- Recharts.

Architecture

- Reusable components.
- Centralized theme tokens.
- Consistent spacing variables.
- Shared layouts.
- Feature-based component organization.
- Responsive design utilities.

Use real anime artwork from the metadata provider. Never use random unrelated images as anime posters.

Ensure: image aspect ratios are consistent; poster images use portrait ratios; hero banners use landscape ratios; fallback artwork is available; images are optimized and lazy-loaded.

28. Final Design Quality Checklist

Before considering the interface complete, verify:

[ ] Homepage feels premium and editorial.
[ ] Desktop navigation is intuitive.
[ ] Mobile bottom navigation works correctly.
[ ] Anime posters are visually consistent.
[ ] Anime detail pages have strong hierarchy.
[ ] Manga pages use appropriate layouts.
[ ] Profiles feel personal and customizable.
[ ] User libraries are easy to manage.
[ ] Add-to-list interactions are effortless.
[ ] Progress can be updated quickly.
[ ] Search and filters are intuitive.
[ ] Social feed is easy to browse.

[ ] Reviews are readable and attractive.
[ ] Statistics are understandable.
[ ] Theme switching works across the entire application.
[ ] Light theme is properly designed, not simply inverted.
[ ] Mobile layouts are purpose-built.
[ ] Empty states are designed.
[ ] Loading states are designed.
[ ] Error states are designed.
[ ] Dialogs and menus work on touch devices.
[ ] No visual overflow.
[ ] All interactive controls work.
[ ] Accessibility has been considered.

---

29. Final Creative Direction

The finished platform should feel like a combination of:

- AniList's visual elegance.
- MyAnimeList's extensive anime database.
- Letterboxd's personal identity and review culture.
- Discord's community atmosphere.
- Pinterest's visual collection experience.

However, do not copy these products directly. Create an original visual identity and a coherent design language.

The platform should be: Cinematic. Minimal. Premium. Personal. Social. Responsive. Visually immersive. Easy to use.

Most importantly: Every page must look intentionally designed. Do not generate generic dashboard layouts or place random cards on a page. Think about what the user came to accomplish, what they need to see first, what action they should take next, and how to make that interaction effortless.

Build the complete design system first, then implement each page using the same design language.

Do not stop after the homepage. Apply the same design quality to every route and every interaction.
